Founded in 1958, Henan Zhongtian Electric Equipment Group (hereinafter referred to as Ztelec Group) was formerly owned by the Ministry of Light Industry. Ztelec Group adheres to the core value concept of "Vision, Innovation, and Responsibility" and takes "Power the world with green and reliability" as its own responsibility. Focusing on production and manufacturing for over 50 years, the group has developed into an integrated group company specializing in four industries: Electric equipment, Composite materials, Enamelled copper wires, and Photovoltaic energy. Ztelec Group is represented by 5 manufacturing bases across 4 cities (Xuchang, Guiyang, Chengdu, and Dongguan) in China, with more than 1500 employees worldwide.

Ztelec is focusing on manufacturing MV and LV power generation, transmission, and distribution equipment, as well as PV equipment, including flexible solar panels, energy storage system, energy management devices, and substations. Ztelec owns 1 national postdoctoral research station and 2 provincial technology centers. It closely cooperates with the National Advanced Materials Laboratory of Beihang University and the Institute of Plasma of the Chinese Academy of Sciences to promote intelligent manufacturing levels and digital transformation. Ztelec is a Chinese enterprise committed to the global development, promoting an open technology and partner ecosystem, and actively practicing the common values of meaning, inclusiveness, and empowerment.

03 Our purpose

+ Our culture

Customer First

- Partner with our customers
- Listen first
- · Always smile and show enthusiasm

Embrace Changes

- More choices, more joy
- Believe there is always a better way
- Learn from failures as well as successes

Devotion

- Grow faster with more sharing
- Proud of your team
- · Speak up and ask for help

Care with Respect

- Take care of our people as well as their families
- Respect and value differences
- · Speak directly and act with integrity

04 Industrial development history

We introduced complete testing equipment and manufacturing machines, and started to produce power equipment, including 10kV and 35kV oil-immersed transformers and 10kV switchgear.

Won multiple bids with a total amount of approximately \$6 million for the power transmission and transformation projects from the State Grid Corporation of China.

2009

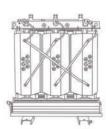

2006

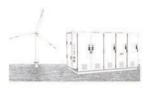

Successfully obtained ISO9001:2008 and ISO14001 certifications; the full series of 6kV, 10kV, and 35kV transformers passed the "type test" and "special test" conducted by the Suzhou Electrical Appliance Research Institute.

2010

Started the production of S11 and S13 series cast resin dry-type transformers. Achieved significant progress in developing the S15 series of high-efficiency amorphous alloy transformers.

Through the cooperation with CNOOC, developed transformers for offshore power supply system under marine operation environment.

2012

Successfully passed the audit of SAM supplier management system from Schneider Electric and became their supplier in the field of Variable frequency transformer.

2017

Began to provide containertype or box-type step-up integrated equipment for energy storage power stations (CESS), which integrates 35kV high-voltage switchgear, lowvoltage switchgear and drytype isolation transformers.

2022

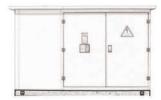

2014

It has gradually formed four product production lines, including oil immersed transformer, dry type transformer, high and low voltage switch gear, and box type substation. Meanwhile, started the sample making and market development of mining transformer, open type transformer and variable frequency transformer.

2019

Started batch production of traction transformer for railway, prefabricated photovoltaic intelligent substation and photovoltaic power generation system equipment.

05 Flexible & High efficient manufacture

Respond quickly to the customer's special requirements regarding environment, appearance, efficiency, delivery time, transportation, special quality requirements, and others. Provide personalized design and shorten the delivery cycle time.

Organize production in accordance with GB and international (IEC and IEEE) standards, implement a full-process control concept from raw material warehousing control to finished product inspection, focus on customers' experiences and core needs, and provide products and services that exceed customers' expectations

+ Maufacturing equipment

- Vacuum casting system
- Cut-to-length line for core sheets
- Vacuum drying equipment
- Winding equipment

After introducing the lean production concept, we established 50 lean improvement quality criteria. Each process is provided with operation instructions and standardized operation criteria to implement the production plan, using timely management to improve communication efficiency and continuously shorten delivery time. The Toyota Production System (TPS), with a core focus on production process management (MPS), has gradually been developed by connecting sales, materials, planning, supply chain, services, and other areas.

06 Testing

Regular Tests

- + Voltage ratio measurement
- + Applied withstand voltage test
- + Induced withstand voltage test
- Partial discharge measurement
- No load loss and current measurement
- Winding resistances measurement
- Insulation resistance test
- + Load loss and short circuit impedance measurement
- Transformer oil test

Type Tests

On customer requirements

- + Temperature rise test
- + Lightning impulse test
- + Noise level test

Special Tests

On customers' requirements, below parameters can be checked

- + Zero-sequence impedance
- + No-load voltage harmonic
- + Parallel capacity of windings
- + Anti-corrosion protection checking
- + Short circuit test

07 Installation and Service

Warehouse

+ In the warehouse, transformers should be protected from the pollution of water droplets, dust and sand. If provided with plastic cover, the transformer should be covered during storage.

Transport

+ The transformer is equipped with safety transport devices. The transformer without shell shall be lifted with lifting lugs, the medium and small dry transformers with shell shall be lifted with lifting rings, and the large transformer shall be lifted with special lifting device for foundation channel steel.

Shipping

+ The product is ready for shipping either by truck or sea freight once it has passed the tests. We take care of all official doucments, depending on destinations and delivery terms. We also provide different packaging for special applications or conditions.

Installation

+ We supply the installation guide and user manual for each transformer. Under normal conditions, check the transformer once a year and clear the dust by vacuum cleaner. The frequency of cleaning depends on the running conditions.

Service

+ When some parts need to be replaced or any information is required, the main parameters on the nameplate must be provided, especially the serial number. We provide stock in regular quantities of spare parts, in case of customer needs.

08 Customer case

Overview

Our company specializes in manufacturing dry type phase-shift rectifier transformer rated voltage up to 20 kV and capacity up to 5000kVA. The products are widely used in the field of petroleum, chemical, metallurgy, textile, coal, cement, rolling mill (steel mill) etc.

Implementation standards

IEC 60076-1~5: Power Transformer

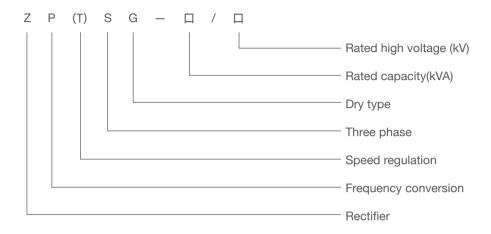

IEC 61378-1:1997: Rectifier Transformer- Industrial Transformer

JB/T 8636-1997: Power Converter Transformer GB1094.11-2007: Dry type Power Transformer GB1094.1-2013: Power Transformer - General

GB1094.2-2013: Power Transformer - Temperature rise

Type description

Dry type rectifier transformer (For variable frequency drive)

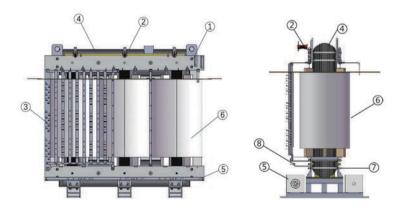

Examples:

Three-Phase Dry-Type Phase-Shift Variable Frequency Rectifier Transformer (ZPSG)

Three-Phase Dry-Type Phase-Shift Speed Control Rectifier Transformer (ZTSG)

Configuration

- ① Nameplate
- ② HV input terminal
- 3 LV output terminal plate
- 4 Core
- ⑤ Fans
- 6 Winding
- 7 HV tap terminal
- Auxiliary power terminal

ZTELEC is a top brand group company strongly supported by our own R&D team.

Dry-type transformer

Overview

Our company specializes in manufacturing a variety of epoxy resin cast transformers with a high voltage of up to 35kV and a capacity of up to 6300KVA. The varieties include SC10, SCB10 series, SC11, SCB11 series, SC12, SCB12 series, SC14, SCB14 series, SC18 and SCB18 series, SC(B)12-SC(B)15 series. The products are widely used in power transmission and transformation systems, such as hotels, restaurants, airports, high-rise buildings, commercial centers, residential quarters and other important places, as well as subways, smelting power plants and other harsh environments.

Implementation standards

IEC 60076: Power Transformer

EN50588-1: Medium power transformers for 50 Hz with a highest voltage for equipment not exceeding 36 kV -

Part 1: General requirements

IEEE C57.12.01-2015: IEEE Standard for General Requirements for Dry-Type Distribution and Power Transformers

EU548 Tier 2

GB 1094: Power Transformer

GB/T10228: Specification and Technical Requirements of Dry type Power Transformers

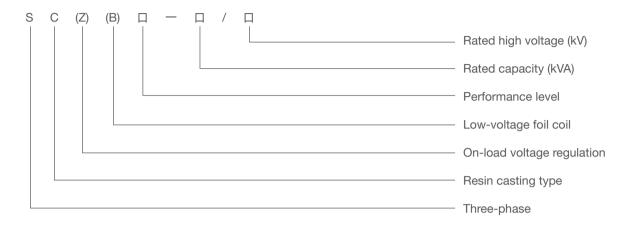

JB/T10008: 6kV~500kV Power Transformer Sound Level

GB/T7354: Partial Discharge Measurements

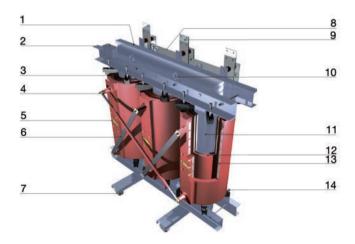

Type description

Dry type rectifier transformer (For variable frequency drive)

Configuration

- Nameplate
- Distribution box
- Temperature probes Pt 100
- HV output
- 5 For primary coil voltage changing

- HV connection-to triangle
- Wheels for longitudinal and transverse movement
- Neutral output
- 9 LV output

- 10 Lifting lugs
- Magnetic circuit
- Low voltage
- 13 High voltage
- 14 Ground connection

Features

- + Low consumption, energy saving, low noise, no maintenance, no pollution and can be directly installed in the load center;
- + Strong resistance to short circuit, low partial discharge, high reliability;
- + Strong cooling capacity, can be operated under 140% rated load in the condition of forced air cooling;
- + Corrosion resistance, moisture resistance, flame retardant, fireproof, can be operated in high humidity and other harsh environments;
- + Equipped with intelligent temperature controller, which can be monitored and controlled centrally to ensure the reliable operation of the transformer.

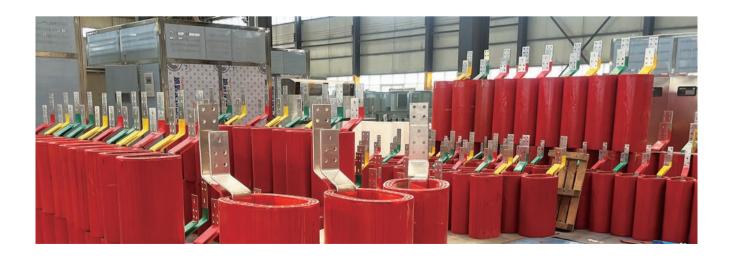

Overview

With filler thin insulation and coil encapsulated by epoxy resin, this series of dry type transformers is flame-retardant, fireproof, explosion-proof, free from maintenance and no pollution and it is compacted and can be installed at load center. Besides, with scientific and reasonable design and coating craftwork, it has advantages of low partial discharge capacity, low noise and good heat dispersion. It can run for a long time with 140% rated load in the circumstance of forced air cooling. It is also equipped with an intelligent temperature controller to conduct centralized monitoring and control.

Features

- + Safe, flame retardant, pollution-free, and can be directly installed in the load center;
- + Maintenance-free, easy to install and low integrated operation cost;
- + It has good moisture-proof performance and can operate normally under 100% humidity;
- + Low loss, low partial discharge, low noise, strong cooling ability, and 150% rated load operation under forced air cooling conditions;
- + It is equipped with perfect temperature protection control system to provide reliable guarantee for transformer safe operation;
- + High reliability. According to the operation research of the products that have been put into operation, the reliability index of the products has reached the international advanced level;
- + The transformer adopts BWDK series signal thermometer. The temperature measuring element is embedded in the upper part of the low-voltage coil. It can automatically detect and display the working temperature of the phase coil, and has the functions of over-temperature alarm and trip.
- + Low voltage winding is made of pure cooper (or aluminum) foil and manufactured on special low voltage foil winding machine, with turn insulation of class F. Foil coil can solve the problems of low voltage, high short-circuit stress of high current coil winding products, ampere-turn imbalance, poor heat dissipation effect, large spiral angle of winding, unstable quality of manual welding and so on. At the same time, the winding end of our company adopts resin for sealing, solidification, moisture-proof and anti-fouling. Copper bars are welded automatically by argon arc welding.

Features

+ The series of dry type transformers is used to directly reduce the 35kV grid power supply to 400V distribution power supply for users. Remove 10kV power transmission and transformation, significantly reduce operating costs, reduce multi-level power transformation project construction, and have significant social benefit. The product has improved the distribution of inter-layer voltage and capacitance by optimizing the high voltage coil structure, which greatly improves the product's ability to withstand the impact of atmospheric overvoltage and operational overvoltage, and also improves the distribution of electric field, which further reduces the product's partial discharge.

Features

+ The iron core of amorphous alloy transformers is made of amorphous alloy. Amorphous alloy materials have a disordered amorphous state of the metal atoms and a lower loss than the silicon steel core, achieving high efficiency and energy saving. The area enclosed by the hysteresis loop of the amorphous alloy is much smaller than that of the cold rolled steel sheet, so the hysteresis loss of the amorphous alloy is much smaller than that of the cold rolled silicon steel sheet and its core loss is very low about 70% lower than the no-load loss of traditional silicon steel sheet iron core transformers, Amorphous alloy transformer is an ideal low-loss and energy-saving transformer. Due to low loss, amorphous alloy transformers generate less heat, have low temperature rise, and have very stable performance.

Features

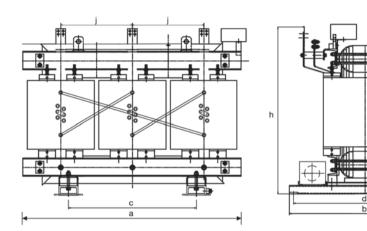

+ When this series of dry - type transformers is connected to a grid voltage of 20 kV or 10 kV, the connection state between two windings of each phase high - voltage coil is controlled by a conversion device, achieving the purpose of voltage conversion by series or parallel connection, while keeping the output voltage constant. Thus, one transformer can be connected to two voltage systems of 10 kV and 20 kV not simultaneously. It can reduce the repetitive investment and enable convenient and quick conversion and also has stable product performance.

Overview

Compared with energy efficiency level II products, the energy efficiency level I has more obvious advantages in terms of performance. The no-load loss is reduced by about 20% on average, and it is safe and fireproof. It can be directly operated in high-load power-consuming places. It is an ideal choice for factories, hospitals, tunnels, airports, power station and so on.

Overview

We adopt domestic advanced technology and design and produce in strict accordance with the relevant standards for energy-saving dry type transformers in GB20052-2024. The products have the advantages of strong short-circuit resistance, convenient maintenance, small size, small footprint, and low noise. They are ideal for factories, hospitals, tunnels, airports, power stations, etc.

Order Information

Normal use conditions for the product

- **a** Environment temperature: highest temperature 40°C, lowest -30°C.
- **b** Elevation: no more than 1000m.
- C Relative humidity: daily average≤95%, monthly average≤90%.
- d Maximum wind speed (outdoor): 35m/s (10m above the ground and average value over 10 min).
- e Anti-earthquake performance (withstand): 8.

Order Information

In order to provide you with better service, the following data are required when ordering.

- + Specification and type
- + High voltage
- + Low voltage
- Coil material
- + Phases

- + Tapping range
- + Rated frequency
- + Vector group
- + Insulation grade
- + Ambient environment
